SUMMARY

I am a software engineer specializing in integrating AI solutions with products. I have a short yet diverse experience working in various areas like web development, data science, devops, backend development as well as app developement. I love to get involved in the entire lifecycle of a product - from brainstorming product ideas, design, implementation, model training to deployment at scale and devops.

WORK EXPERIENCE

University of Florida — Gainesville, FL

Research Assistant *- Modern Artificial Intelligence and Learning Technologies (MALT) lab* *Oct 2019 to Present*

- **VAE - Scientific data compression:** We propose a novel architecture for **autoencoders and variational autoencoders for compression and generation**, respectively, of higher dimensional physics data.
- **Temporal data - Traffic estimation:** Implemented a queue length prediction algorithm at signalized road intersections for estimation of travel times by analysing data from induction loop sensors using **platoon matching**.

Graduate Assistant *- iHeal lab* *Jan 2020 to May 2020*

- **Intelligent ICU:** Implemented **Pose estimation** from RGB and depth images for monitoring patients in the ICU

HERE Technologies — Mumbai, India

Senior Software Engineer *Mar 2019 - Jul 2019*

- **Computer vision:** Developed a rapid prototype for a new product, later released as the HERE LiveSense SDK. It involved **real-time object detection, multi-object tracking** and **distance estimation from 2d image stream**, on edge devices with hardware constraints.

Software Engineer 2 *Jul 2017 - Feb 2019*

- **Machine learning:** Automated detection of duplicate places in geospatial data. Worked with Subject Matter Experts (SMEs) to understand and concretize the problem statement. Implemented, tested and deployed models at scale.
- **Full Stack development:** Ideated, designed and implemented a drag and drop tool to create domain specific business rules, using the **visual programming** paradigm. Led to an **improvement of 80%** in the average turn around time of a rule.

Intern *Jul 2016 – Dec 2016*

- **Backend development:** Implemented business rules in **scala**.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, Javascript (& HTML+CSS), Scala, SQL
- **ML Libraries:** Pytorch, Keras, Pandas, Numpy, Sklearn
- **Web Frameworks:** Vuejs, Angularjs(1.x)
- **DevOps:** Docker, Jenkins, AWS, gcloud, Git
- **Software engineering:** agile

EDUCATION

- **University of Florida, United States:** MS in Computer Science, **GPA: 3.77/4.0** **Expected Graduation: May 2021**
  Coursework: *Fundamentals of Machine Learning*, *Analysis of Algorithms*, *Advanced Data Structures*, *Mathematics for Intelligent Systems*
- **BITS Pilani, Hyderabad Campus, India:** B.E. in Electrical and Electronics Engineering **Aug 2013 - Jul 2017**
  Coursework: *Quantum computing*, *cryptography*
